. . your 100% guaranteed. One of the most common complaints with those generic antivirus programs is that they just don't work. They can stop you from infecting your computer with viruses and keep you from being infected, but they can't keep your bank account and social media accounts safe from hacking. With all that in mind, the question is - which antivirus software will protect you from hackers, ransom-ware, malware, worms, Trojans, rootkits and the latest threats? I'm going to tell you my own experience and that of a lot of other business people, and the fact is, none of them were satisfied with the other antivirus programs available. They were never convinced that there wasn't a better way, so I researched and tested every available antivirus program available to me and picked the top 10. I tested each one to see how well it would work. I tested each one against other products, and I compared scores on my test to see which programs were really standing out. This is the kind of test a mother and daughter team did when we were building CompuCover. The difference between it and other antivirus programs was that it was entirely different in almost every way. It was the only antivirus product I know that is completely different from anything else. It's not the same antivirus program used by millions of other people. It has never been tested on the same antivirus engine as any of the other programs, and CompuCover stands out because of it. Test Results I did my own testing of each antivirus program I selected, and the results were quite interesting, to say the least. Most of the other antivirus programs I tested just didn't do a very good job. They were fooled by trojans and worms and did nothing to protect my computer. They were just doing something, and they were good at it, but they weren't doing enough. But CompuCover put a halt to all of the hacking and prevented it from taking place in the first place, and that's what mattered to me. Of the programs I tested, CompuCover put the most stops on the most threat vectors. It is the first program I run when I turn my computer on every single morning, and it protects my computer at all times from viruses, worms, Trojans, rootkits and other malware. And this is what sets Compu
